Research Assistant, Harvard University, Professor James Stock, 2023-2024 Research Assistant, Harvard University, Professor Myrto Kalouptsidi, 2022 Research Assistant, Harvard University, Professor Marc Melitz, 2020

Job Market Paper

"Power Decarbonization in a Global Energy Market: The Climate Effect of U.S. LNG

Exports"

Investment in clean power depends on the price of internationally traded fossil fuels. To what extent can major fossil fuel exporters like the U.S. influence global electricity decarbonization through their trade policy? To answer this question, I develop and estimate a dynamic, multi-

country model of power asset investment, where the carbon intensity of electricity generation is affected by the entry and exit of plants using alternative fuels and the local price of fossil inputs is determined in a global trade equilibrium. Using this model, I assess the climate impact of granting federal approval to all proposed U.S. liquified natural gas (LNG) export terminal projects, which would double U.S. export capacity by 2030. Results indicate a net decrease in global emissions through 2070, primarily due to higher local gas prices in the U.S., leading to lower domestic gas generation and accelerated renewable adoption. In the rest of the world, short-term emissions fall as reliance on coal drops, yet delayed renewable uptake drives long-term emissions up. Combining the LNG expansion with carbon policies in importing countries substantially boosts carbon savings. Conversely, reverting LNG capacity to baseline by 2050 shows little impact, underscoring the risk of carbon lock-in in settings with long-lived infrastructure.

Working Papers

"Firm-to-firm Barganing in Domestic Networks", joint with Anhua Chen and Federico Huneeus (third-year paper)

How do foreign input shocks affect the prices and markups negotiated within a network of domestic firms? We study this question by combining detailed firm transaction data from Chile with an industry equilibrium model of price-setting in the presence of two-sided market power. We first document patterns on the relationship between bilateral supplier and buyer shares and prices in firm-to-firm transaction networks. Suppliers charge lower prices to their largest buyers, and input buyers receive higher prices from their key suppliers. To understand the equilibrium effects of an international trade shock on a domestic network, we perform empirical simulations on a network that replicates the main features of the Chilean economy and behaves under the price-setting assumptions of our model. We find that, in the face of a 16% simulated increase in foreign input costs, the markups of domestic inputs increase by 1.2% on average. This average increase masks significant heterogeneity across input suppliers, with small but dedicated input domestic suppliers increasing their markups by almost twice as much as the average response.

"Does it matter where and what I study? Evidence from the oil price crash in Canada", joint with Pascuel Plotkin

We estimate the impact of a labour demand shock on Canadian recently graduated bachelor students. We leverage a unique Canadian administrative data that features links between individuals post-secondary education and their tax-files. We estimate that a standard deviation increase in school-major specific labour demand, increased earnings immediately in a magnitude between 2.3 and 2.6 log points, with persistent and increasing effects throughout the oil shock. Additionally, the labour demand shock had effects on other labour market outcomes such as unemployment or self-employment. In terms of schooling, school-major specific labour demand had a positive effect on dropouts, which remarks the importance of considering the outside option of students when studying school enrollment.
